

RANU KUMAR VERMA

Bengaluru, Karnataka 560035 | +91 90126 91357 | ranuverma7599@gmail.com | linkedin.com/in/ranuverma759

Professional Summary

Results-driven **Java Consultant** with **4+ years** of experience delivering scalable enterprise applications for top-tier global financial clients (JP Morgan Chase, UBS). Expert in **Spring Boot microservices**, Kafka event streaming, RESTful APIs, and cloud-native development on **AWS**. Proven track record modernising 180+ legacy systems with a **30% performance gain**. Skilled in observability (Splunk), ITSM (ServiceNow), and Agile delivery. Expanding into **Generative AI** and LLM-driven architectures.

Technical Skills

Languages: Java, SQL, Bash / Unix Shell Scripting

Frameworks: Spring Boot, Spring MVC, Hibernate ORM, Maven

Architecture: Microservices, RESTful API Design, MVC, SOLID Principles, Design Patterns

Messaging & Streaming: Apache Kafka (SaaS), Event-Driven Architecture

Databases: Apache Cassandra, Snowflake, MSSQL, MySQL, Query Optimisation, Index Tuning, Schema Design

DevOps & CI/CD: Git, TrueCD, GitLab CI/CD, Azure DevOps, Docker, Kubernetes, Jira, Bruno Workspace

AI & Developer Tools: Claude Opus 4.7, Claude Opus 4.8, Claude Sonnet, GPT-5.2, LLMSuite, IntelliJ IDEA Copilot (Ask, Plan & Agent Mode), Prompt Engineering

Cloud & Infrastructure: AWS, Microsoft Azure, DevShell, RHEL8 Administration, PuTTY

Observability & Testing: Splunk, ServiceNow, JMeter

Professional Experience

Java Consultant

March 2026 – Present

Tata Consultancy Services (TCS), Bengaluru | Client: JP Morgan Chase | Project: Rewards Earning Engine

- Building and enhancing the **Rewards Earning Engine** using Java and Spring Boot microservices, enabling real-time reward computation for millions of JP Morgan Chase customer transactions on **AWS**.
- Designing **Apache Kafka (SaaS)** event-driven pipelines to process reward events asynchronously, ensuring fault-tolerant and low-latency message delivery across distributed services.
- Modelling and optimising **Apache Cassandra** data schemas for high-availability storage of reward records, handling peak financial transaction volumes with consistent low-latency reads and writes.
- Leveraging **Snowflake** for cloud data warehousing of reward analytics; managing CI/CD via **TrueCD** and **AWS DevShell**; monitoring with **Splunk** and resolving incidents through **ServiceNow**.
- Boosting development velocity using **Claude Opus 4.7, Opus 4.8, Claude Sonnet, GPT-5.2, and LLMSuite** in IntelliJ IDEA Copilot across **Ask, Plan, and Agent** modes for code generation, review, and debugging.
- Validating APIs with **Bruno Workspace** and benchmarking with **JMeter**; managing sprints and defects through **Jira** in an Agile/Scrum delivery model.

Java Developer

December 2021 – November 2025

Wipro Limited, Bengaluru | Client: UBS (Global Investment Bank, Switzerland)

- Spearheaded migration of **180+ legacy Java batch jobs** and web applications to **Spring Boot microservices**, boosting scalability and cutting execution time by **30%**.
- Architected production-grade **RESTful APIs** with SOLID principles and GoF design patterns, ensuring modular, fault-tolerant distributed service design across the UBS enterprise platform.
- Built **Azure DevOps CI/CD pipelines** automating build, test, and multi-environment deployments, eliminating manual bottlenecks and reducing production deployment errors significantly.
- Optimised **MSSQL and MySQL** queries via execution plan analysis and index restructuring, achieving a sustained **30% improvement** in database response times under peak load.
- Automated workflows via **Unix Shell Scripting** and **GitLab CI**; administered RHEL8 servers for provisioning, patching, and performance tuning across all Linux environments.

Key Achievements

- Contributed to JP Morgan Chase's **Rewards Earning Engine**, processing real-time rewards for **millions of transactions** with high availability and fault tolerance on AWS.
- Delivered migration of **180+ Java batch jobs and web apps** at Wipro on time with **zero critical post-migration defects**, directly improving UBS production stability.
- Achieved **30% reduction** in SQL query execution time and batch throughput via targeted performance engineering, lowering infrastructure costs under peak volumes.

Education

B.Tech – Computer Science & Engineering

August 2017 – August 2021

Dr. A.P.J. Abdul Kalam Technical University, Lucknow, Uttar Pradesh

Certifications & Professional Development

- Anthropic Claude Certified Associate Foundation** – Certified
- Anthropic Claude Certified Developer – Foundations** – Certified
- Actively using **Claude Opus 4.7, Opus 4.8, Claude Sonnet, GPT-5.2 & LLMSuite** in IntelliJ IDEA Copilot (Ask, Plan & Agent mode) for AI-assisted development and productivity
- Wipro internal training: Advanced Microservices Design, Spring Boot best practices, Java performance optimisation
